Abstract Class and Interface Exercise

<<interface>>
Account

+void open()
+void close()
+void withdraw(double amount)
+void deposit(double amount)

implements

<>
AccountImpl

#String accountNo
#double balance

+AccountImpl(String accNo, double amt)
+void withdraw(double amount)
+void deposit(double amount)

Saving

+void open()
+void close()

OverDraft

-double overdraftLimit

+void open()
+void close()
+void withdraw(double amount)
+void setOverDraftLimit(double limit)
+double getOverDraftLimit()

AccountFactory

<<static>>+Account create(String acc, double bal, String accType)

```
// Client Code

Account account1 = new AccountFactory.create("SB1001", 1000, "SAV");
account1.open();
account1.deposit(4000);

Account account2 = new AccountFactory.create("OD1001", 10000, "OD");
account2.open();
account2.withdraw(4000);
account2.withdraw(7000);
account2.deposit(1000);
```
